

22/25

Present *Team 3*

Criterion	Score	Notes
Functionality demo — walks through the app; advanced features shown clearly (mobile vs. desktop, intermediate and stretch claims)	<u>5</u> / 5	You showed a lot! The Map post was great.
Source code excerpts — focused (not whole codebase); illustrates reuse, modularization, or best practices; well explained	<u>3</u> / 5	Didn't see much code, but discussed.
Data flow — explains the role of the 3P API(s) used and what data is persisted in localStorage / handled by import/export	<u>5</u> / 5	Multiple APIs. Everything stored.
Reflection & problem-solving — names real challenges, how they were solved, and meaningful takeaways about the process	<u>5</u> / 5	Proxy server
Delivery — every member contributes substantively; transitions are cohesive; pacing is clear	<u>4</u> / 5	⊖ fonts too small to read on projector ⊕ good teamwork!

12:05 Mubarak / Michael

Purpose & UI = Green inspired by old (2003) Steam UI

Demo the mobile layout, Blue theme based on current Steam UI

12:07 Michael (Home)

Fetch information - enter url / ID, export/import, favorites

12:08 Mubarak (Profile)

Fetch one game, import games from other user sets up
Filter list by played most/least - settings tabs filters

12:10 Mubarak (Theme) / Michael (Mapping)

Showed code for DOM manipulation

(IGDB API)

Set times per day of week - set completion times for games

maps out ETA for completion

can also import manually (Ex: if not on Steam or profile)

12:13 Q&A How did you get the colors? Used color picker site
and imported screen shot

Main difficulty: set up proxy server for API
